

ABSTRACT OF THE DISCLOSURE

Encoded ^{moving} ~~animating~~ image data is decoded, the
decoded ^{moving} ~~animating~~ image data is intraframe encoded and
stored, ^{and} the image which was stored and intraframe
5 encoded is decoded and subjected to an arbitrary
edition, ^{the} and the ^{the} edited frame image is encoded by an
^{moving} ~~animating~~ image encoding system, thereby reducing a
10 memory capacity when ^{a moving} ~~an animating~~ image edition is
performed and realizing a high processing speed.
